SENIOR DevOps ENGINEER

800-CEO-READ, a bulk book e-commerce retailer in Milwaukee, WI, is seeking an experienced Senior DevOps Engineer. You will work under the direction of our Technology Director on a greenfield service project relating to eCommerce and help apply the DevOps philosophy to our existing software development lifecycle.

Duties: You will draft and build an infrastructure architecture for a new service layer integration point, establish software deployment guidelines, configure CI/CD pipelines, create testing and staging environments, maintain PCI SAQ compliance, improve upon existing system automation, and oversee the maintenance of our existing servers, networks and workstations with the goal of becoming a primary stakeholder in future improvements and changes.

Qualities: You are self-motivated and passionate about your specialty, with broad knowledge of technologies. You are well-organized, resourceful, and confident when working independently, yet you welcome collaboration and the opportunity to help users solve problems.

Recommended Requirements:

- **Strong background in systems administration (8-10 years):** In-depth experience with Linux or an applicable UNIX/BSD variant and familiarity with Windows Server and OS X.
- **DevOps or SRE experience (3-5 years):** Experience with at least one major cloud provider. The new service layer project will integrate with systems running on Azure.
- **Continuous Integration/Continuous Delivery:** Experience with a CI/CD tool such as Visual Studio Team Services (VSTS), CircleCI, Travis CI or other applicable solution. We currently use VSTS.
- **Automation:** Experience with Ansible, Chef and/or Puppet. We currently use Ansible.
- Containerization/Virtualization: Experience with Docker as well as a virtualization platform (e.g., Xen, KVM, Hyper-V or VMWare.)
- **Agile Software Development:** Experience working with developers using Source Code Management such as Git and an understanding of project management tools like Kanban boards with features and user stories.
- **Experience with a high-level programming language:** Use of Python, Ruby or similar to support automation or create self-service tooling as part of a deployment pipeline.

Preferred, not required: If you have experience with centralized logging, application telemetry, data analytics, or more advanced networking, we'd love to hear about it.

Salary & Benefits

Salary (range $85k - $105k) is commensurate with experience. Benefits include: 80% of healthcare policy coverage, disability coverage, 401k, and a generous time off policy. Hours are approximately 8:30-5 M-F.

800-CEO-READ values curious, innovative thinkers who thrive in a relaxed yet high-performing work environment, and is proud to be an equal opportunity employer.

To apply: email resume and cover letter to Sally Haldorson, General Manager at sally@800ceoread.com (no phone calls please). Deadline is 9/24/2018.
